

Course Objectives of the Doctor of Naturopathic Ministry Program (D.N.M.)

Graduating from the Doctor of Naturopathic Ministry program will enable the graduate to accomplish the following:

1. Understand the beauty, complexity, creative design and function of the divine creation, the human body.
2. Understand and apply biblical directives concerning ministry to the whole person including body, soul and spirit.
3. Hear the voice of God and enjoy two way communion.
4. Design spiritual exercises to allow clients to develop spiritual fruit and overcome spiritual enemies.
5. Follow divine guidance in solving difficult health problems.
6. Unleash the power of divine healing to bless those suffering from health problems.
7. Design spiritual exercises to allow clients to grow in character and solve problems in their minds, wills and emotions.
8. Live and teach God's laws of healthful living.
9. Work in missionary infectious disease clinics worldwide.
10. Apply a systematic and comprehensive method of health analysis and therapy regarding all aspects of infectious disease.
11. Use muscle testing techniques to identify toxins, parasites and infectious agents causing health problems and guide clients with appropriate healing techniques.
12. Recognize various types of disease-causing organisms, their characteristics and life cycles and the relationship between toxins and infectious disease.
13. Understand the role of infectious disease in world healthcare and the relationship of infectious disease to chronic disease conditions.
14. Support clients in their recovery from chronic disease conditions.
15. Kill parasites and infectious agents using herbal combinations, electronic equipment, and oxygenation.
16. Repair parasite damage to all organs and tissues of the body.
17. Build immunity against infectious disease organisms, and avoid reinfection.
18. Aid clients in the removal of chronic toxins with herbal combinations, hydrotherapy, hyperthermic therapy, electrolysis, oxygenation, and electronic instruments.
19. Evaluate the role of infectious agents in genetic disorders and help their clients repair damaged genes and reverse mutations.
20. Identify premature organ aging and stimulate the production of new cells that will repair prematurely aging organs.
